Date: 2 March 2026

Wera Werkzeuge GmbH:

Ratchets with a feel-good factor - how does that work?

Wuppertal.

Zyklop Comfort ¼"

The new Zyklop Comfort ¼" proves it: slim, black, uncompromisingly stylish, and equipped with a soft, ergonomic grip zone. Even in a set, it makes a strong design statement, as the elegant yet robust textile box ensures it takes centre stage in any workshop. With 80 teeth and a return angle of only 4.5°, the ratchet delivers pure precision. The slip-proof plastic sleeve is a true treat for your hands, ensuring that even hot or cold screwdriving moments are genuinely enjoyable. Reversing? Done intuitively via a lever - even with just one finger. The push-button socket locking ensures a secure and reliable fit. The new ratchet plays in the same band as the Zyklop Comfort 3/8", which has been on tour since 2024.

Zyklop VDE ¼"

Next up is the 1/4" Zyklop VDE 8007 A ratchet, alongside the 3/8" version: a true power star for electricians experts. Like its counterpart, it is extremely slim, has 80 teeth with a 4.5° return angle, and is built for tight spaces and precise manoeuvres. Each individual ratchet is tested at 10,000 volts and approved for work at up to 1,000 volts. The secure push-button socket locking and quick change of direction via the reversing lever make it a reliable partner when things get serious.

The plastic sleeve feels comfortable in the hand and protects surfaces from damage - even during fast-paced work. The soft handle zone allows for comfortable screwdriving, even on long workdays with demanding tasks.

Where are the most fan clubs? Wherever VDE tools are in action. And this Zyklop VDE ratchet earns especially strong applause in electrical building installations.
