Wera Werkzeuge GmbH:

Kraftform Kompakt VDE GO

Quick access and one-handed operation

Wuppertal.

The idea behind **Kraftform Kompakt VDE GO** did not originate on a computer, but directly on the building site. In numerous discussions with professionals, one thing became clear time and again: tools must not take up one or both hands when carried; they must be quicker to access and easy to change. This is precisely what led to the creation of the new system.

The compact holster fits comfortably on your belt and ensures the tool is ready for immediate use at any time. Take the handle, select the correct inter-changeable blade, and carry on working. All with just one hand. A real game-changer, especially when working on ladders, scaffolding or in challenging working conditions.

Thanks to its compact design and light weight, the Kraftform Kompakt VDE GO is ideal for use on the move. Always with you. Always at hand.

The sets include insulated tools, each of which is tested individually at 10,000 volts in accordance with IEC 60900. For safe working up to 1,000 volts.

The centrepiece of the sets: the **837 i RA VDE blade-holding handle**. Its integrated ratchet, with 40 teeth and a return angle of just 9°, noticeably speeds up any screwdriving job. Less repositioning, more progress. It gets even faster with the tried-and-tested 'fast turning function'. The ratchet mechanism enables lightning-fast 'turning' on smooth-running threads and speeds up the work where every second counts.

Also included are four inter-changeable VDE blades featuring the **Take it easy tool finder**. Colour-coding and size markings ensure that the correct blade can be found straight away.

And to make sure nothing gets lost whilst you're out and about, each tool is held securely in the holster by sturdy elastic loops.
